## **A Family Transformed**

When Save A Family Plan staff visited Malu, she was seriously affected by untreated tuberculosis and poor nutrition. She and her family lived in a shed covered with bamboo sticks. They lived on food that her husband could find in the forest, and there was no clean drinking water.

Thankfully, our Field Coordinator knew their language and helped Malu obtain medical care. Following a six-year plan, the family purchased a pair of goats, built a modest home, and started a garden. Their oldest daughter began to attend school.
